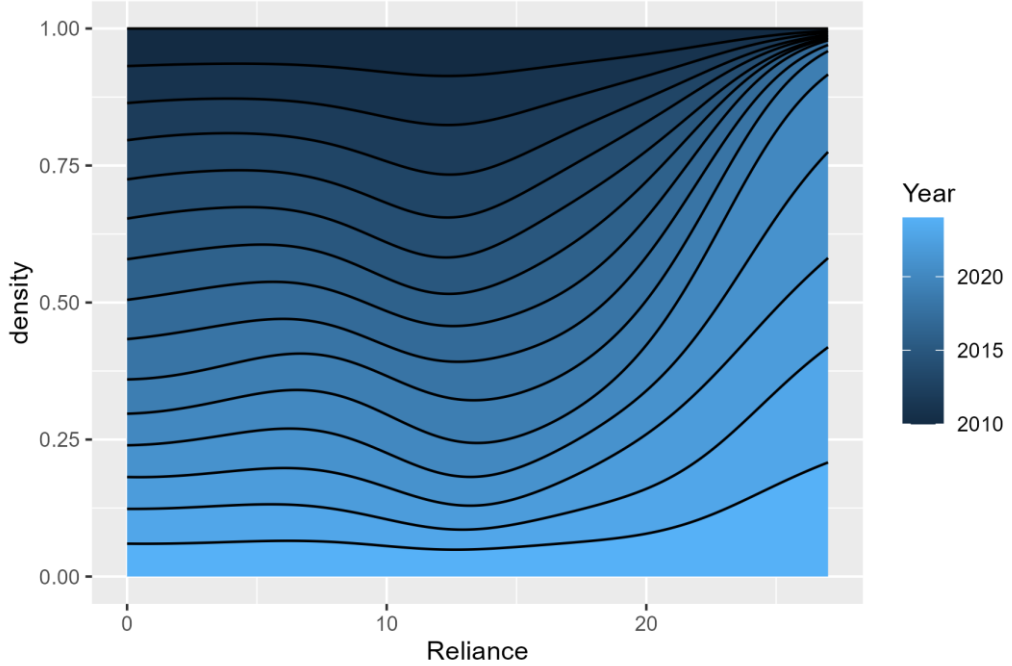
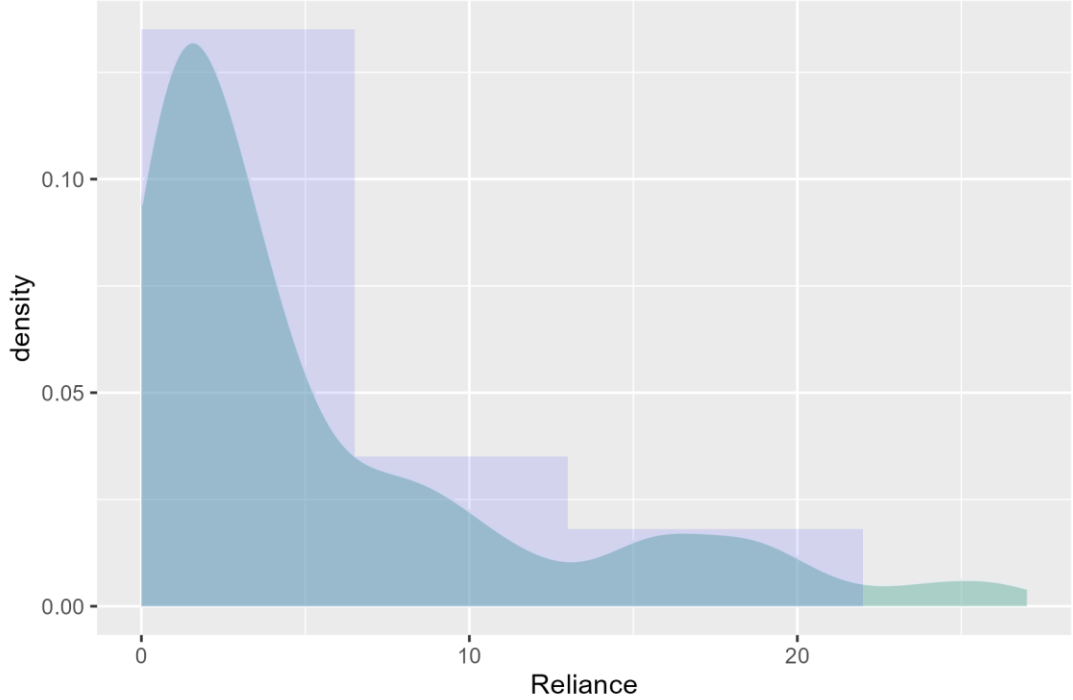
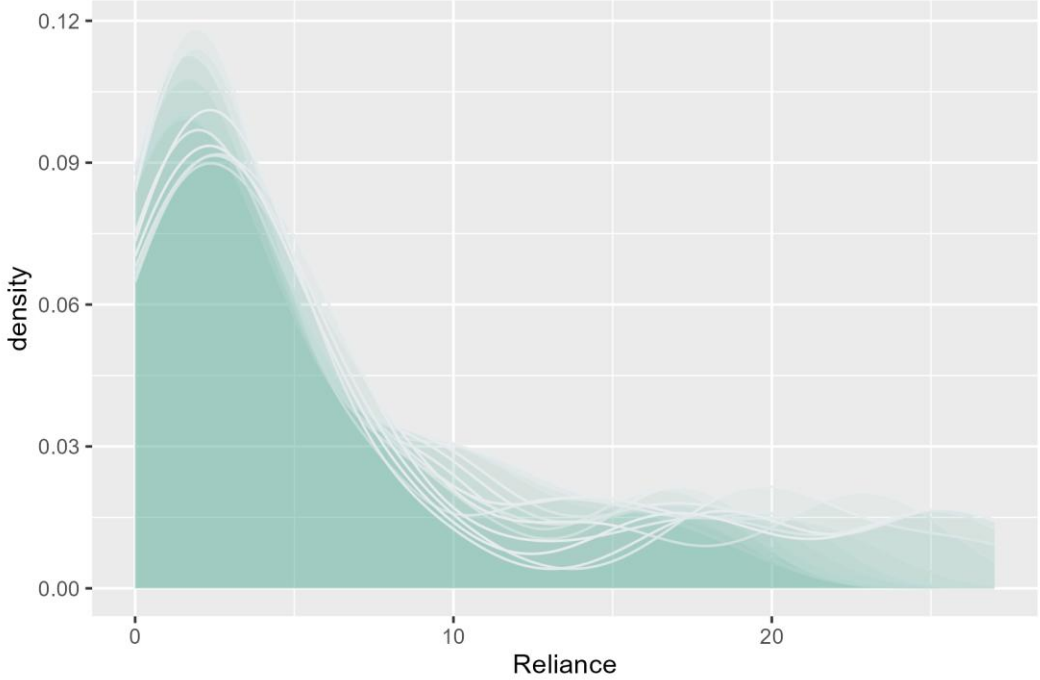
- People who receive remittances tend to have increased political activity compared to before they received remittances & people who do not
- How does this play out in a world where our political decisions are often shaped by the tangible world around us?
- My intuition is that as more people rely on remittances in a country, there will be more protest activity. This can be due to the clarity of government underperformance in providing needs for people.

Is there a relationship between the protest activity of remittance receivers and a state's reliance on remittances?

- AmericasBarometer
  - Data from 2010-2023
  - 122,219 observations
- Outcome: *Have you attended a protest in the last year?*
  - Yes/No
- Clustered by: Remittances received, % of GDP
- Treatment: *Do you or someone else living in your household receive remittances, that is, economic assistance from abroad?*
  - Yes/No
- Unit fixed effects & Time fixed effects
- Demographic controls

- Will estimate both LPM & Logit






- Clustering based on density?
- Incorporating change over time?
- Evaluating number of protests attended?
